

arcon decofloor

Non-slip frit on tempered and heat-strengthened glass

➤ arcon decofloor – non-slip frit on tempered and heat-strengthened glass

The new product line arcon decofloor has been added to the company's existing range of safety glass. In modern architecture, transparent room concepts are becoming more and more common – in particular, walkable glazing is increasingly replacing the usual opaque structural elements like floors, ceilings and stairs. To comply with statutory regulations, arcon decofloor is available in non-slip classes R10 and R12 to DIN 51130. For use as walkable glazing arcon decofloor must always be designed as a laminated safety glass.

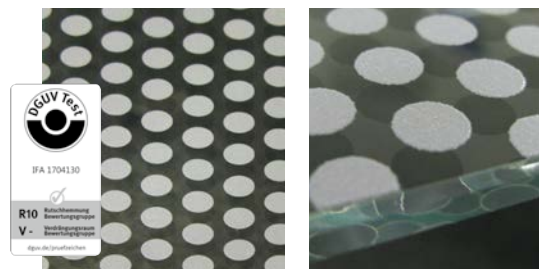

➤ Areas of use

- Floors
- Staircases
- Balconies
- Bridge glazing

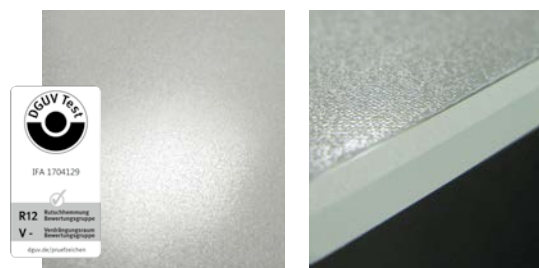

➤ Delivery options

- Monolithic toughened and heat-strengthened safety glass, maximum dimensions: 2,800 mm x 6,000 mm
- Laminated safety glass and walkable laminated safety glass, maximum dimensions: 2,600 mm x 5,000 mm
- Print on float and low-iron glass
- Edge treatment, drilling holes and shaped panels
- Available in a lot of different screen printing colours
- Can be combined with low-e and solar control coatings

➤ Design examples

Non-slip class R10 in dot pattern;
print area 40 %, 8 mm dots

Non-slip class R12 full-surface etching
